

6WINDGate Control Plane

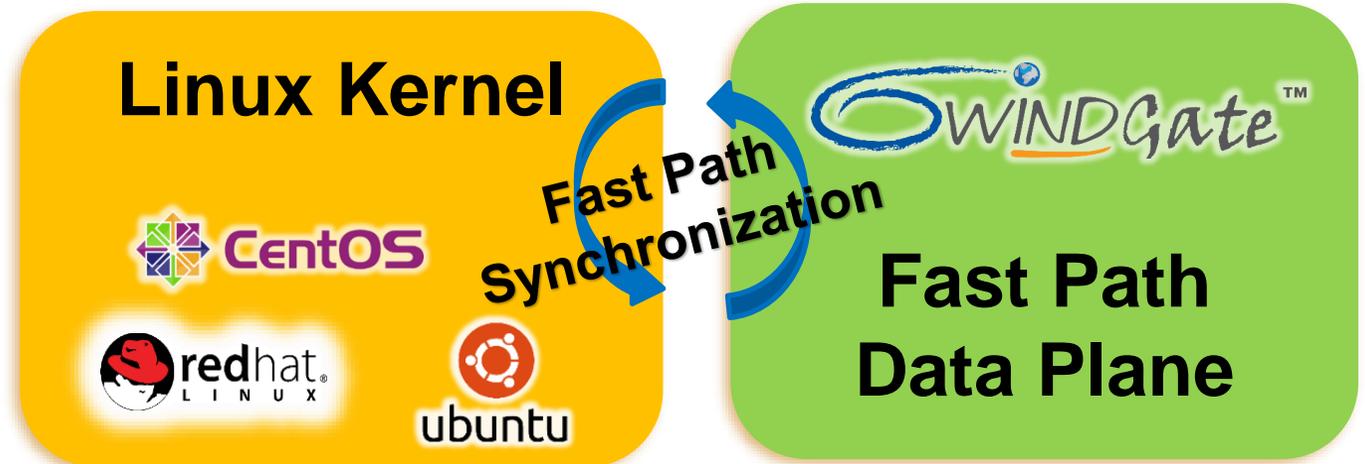

#SPEEDMATTERS For Serious Networks

6WINDGate Control Plane Modules

- **Routing (based on FRR)**
 - RIPv1/RIPv2 for IPv4 and RIPng for IPv6
 - OSPFv2 and OSPFv3
 - BGPv4
 - MPLS
 - Virtual Routing
- **Security (based on StrongSwan)**
 - IKEv1
 - IKEv2
 - VPN Monitoring
- **L2TP / PPPoE client and server**
- **OVS**
- **All these Control Plane modules are validated to run with 6WINDGate Fast Path modules**

Benefits of Linux – Fast Path Synchronization

- Existing Linux applications are not modified and developing new applications is pure Linux development
- Compatible with third-party open source or commercial control plane applications that configure Linux (routing, IKE, ...)
- Linux management tools can be re-used (iproute, iptables, ipset, brctl, ovs-*ctl, tcpdump, etc.)
- Supports major Linux distributions

Linux Running 6WINDGate is Linux

Thank You
