v2.x

Throughput

Throughput and number of tunnels

Throughput and number of connections

vRouter Licenses - Features and Capacity

■ Network Licenses

- Provide base feature set
- Different licenses according to capacity (throughput)

■ Application Licenses

- Provide additional features
- Require Network License
- Different licenses according to capacity (tunnels, connections...)

Network License

Turbo Router
(100M to 200G)

Application Licenses

IPsec
(100 to 50K tunnels)

CG-NAT
(1M to 30M connections)

vRouter License Key Overview

- vRouter features and capacity are enabled with a License Key.
- The License Key is provisioned on the License Key Server by 6WIND and retrieved by the customer using the Licensing Portal.
- Requires an Internet connection.
- The License Key is installed and activated on each instance of the vRouter by the customer.

Benefits

- **Flexible floating licensing mechanism to manage a pool of vRouters**
- **Pay as you grow licensing**
 - Increase capacity when needed
 - Add features with Application Licenses
- **License Usage Report summarizes how the license is used**
 - Available to customer using CLI, NETCONF...
 - Useful information to manage licenses: Product, capacity usage, date of end of support, level of support...
 - Provided by customer when a Case is opened using troubleshooting report to help support

Thank You
